Memo: # 4 (Bike and Electric Auto Rental)

DBDS DataBase Design Specialists, Inc.

"We are always 5NF."

To: Hampshire, Jason NN:15, DA
From: Design Team Leader
Subject: Database and Final Report
Date: November 15, 2021

Database:

Make any necessary adjustments to your LDM and/or PDM based on feedback from Memo 3. Use ERwin to generate your database (RDD) on SQL Server 2019 on the server. Name the database BEAR**nn** where **nn** is your number.

Load the data from the memos and carry out your analysis.

Final Report:

Please complete and submit to me your **final report** that will go to the **customer**.

- Recall that the deliverables for this project were **detailed in Memo #0**
- In the LDM, try to draw it so the items that come "first" in the enterprise are at the top (e.g., independent entities at the top)
- Include as an appendix to your report the two draft (old) LDMs and the RDD (PDM) (along with other supporting material relevant to the project but not of immediate interest to the customer).
- Be sure all the data items from memos 1 and 3 are in your test data. Include DML(INSERT statements) for the data load and SELECT * for ALL the tables in your test set.
- **Name your report file BEARFinalNN.docx**

Your prototype database in SQL Server 2019 on the server will be examined in detail in conjunction with the final report.

Deliverable: Final Report Noon on Saturday, December 4, 2021 Look for a Canvas Assignment.
